WORK EXPERIENCE

Backend Intern | Seron Labs, Muscat, Oman

JUL 2026 – SEP 2026

- Shipped 3 features from Figma to production in 2 months, digging into the business logic behind each design and asking the questions to pin down every detail with the CEO and UI/UX team, then pair-testing with the frontend dev.
- Built a one-time + repeating maintenance scheduler (Relational schema, PostgreSQL RPC functions, triggers, views): next round auto-creates on close; rounds can't be double-booked.
- Designed the relational schema and backend logic for the project events module (attendee mappings, event lifecycle mutations), establishing the core data layer the team later built upon.
- Built customer support tooling from scratch; cleaned legacy ticket data, enforced role-based permissions.
- Owned a production database module end-to-end, live in production today.

Software Engineer | Zidan Software, Muscat, Oman (Remote)

MAY 2022 – PRESENT

- Founded an independent development practice, delivering 25+ custom automation & web solutions for clients across 13+ countries from client acquisition to technical implementation.
- Built a parallelized Python extraction system that processes 2,000+ business links in seconds (marketing presence, ads, tech stack data).
- Saved a client €5,000/yr with a custom price-tracking scraper.

SKILLS

Languages:	Python, TypeScript, JavaScript, Dart, SQL
Frameworks:	Flask, React, TailwindCSS
Data & Infra:	PostgreSQL, Supabase, Linux

PROJECTS

Gsvp-dl | github.com/yousephzidan/gsvp-dl

- Google Street View Panorama - Async Downloader for millions of panoramas; built because no existing tool handled both pre/post-2016 formats at scale (or at all). Handles black tiles and configurable zoom.
- The project is open source, and is available on GitHub (62 stars) as a CLI and an API.

EDUCATION

BSc Computer Science | Gulf College, 2025 – 2029
